AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph [0010] with the following paragraph:

[0010] One example renders the slideways and slide elements relatively narrow, so as to result in small contact surfaces at the slide element/slideway pairs, thereby reducing the risk of soiling significantly when compared with the conventional large-area contact surfaces. In disclosed embodiments, the small contact surfaces have smaller dimensions than spacing between the slide element/slideway pairs. In disclosed examples, two of the slide elements are spaced apart by a lateral distance and a third slide element has a contact surface with a lateral dimension that is less than the lateral distance between the other two slide elements.

Please replace paragraph [0028] with the following paragraph:

[0028] The drawings also illustrate how the slide elements 17, 17' and 20, 20', just as the slideways 16, 16' and 19, 19', are only of a slight width in relation to the length of the slide elements, which corresponds approximately to the length of the guide shoe 10. The drawings show an embodiment where the slide elements 17, 17' are spaced apart a lateral distance. The slide elements 20, 20' have a contact surface with a lateral dimension that is less than the lateral distance between the slide elements 17, 17'.
